Please add the following new claim.

Claims 1-20 (cancelled)

21. (New) A customizable aggregated floor controller comprising:
- a plurality of individual non-audio foot controller modules, wherein each non-audio foot controller module of said plurality of individual non-audio foot controller modules is configured to generate at least one non-audio control signal in response to user operation of said individual non-audio foot controller module, and wherein each individual non-audio foot controller module is of a common module size and format, and wherein each module is configured to be fastened with at least one fastener to a mounting frame;
- a mounting frame comprising a plurality of predetermined mounting locations, spaced according to the common module size and format and structured to secure said plurality of individual foot controller modules in a reconfigurable mounting arrangement, wherein each non-audio foot controller module of said plurality of individual non-audio foot controller modules is readily positionable within any of the plurality of predetermined mounting locations; and
- a control signal interface adapted to transmit outgoing MIDI control signals to an external system, wherein said control signals are generated in response to one or more of said electrical signals generated by said plurality of individual non-audio foot controller modules.
